

Improved Formulation starting with Batch 012

The UVGL 910 Overprint Varnish is used for overprints of UVGL colour shades, and is characterised by good transparency and a nice gloss level.

By adjusting the formulation, it has now been possible to further improve the flow.

This also allows the process stability to be further optimized. The changed formulation will therefore be implemented with immediate effect. Besides the improved flow properties, no further changes are to be expected.

For more information on Ultra Glass UVGL please refer to the Technical Data Sheet on www.marabu-inks.com

Date of change-over

This change becomes effective starting with **batch 012** (immediately). You will find an additional remark on the label stating:

“Attention: Improved Formula”
